The Royal League in ventilation, control and drive technology

ZIEHL-ABEGG 

Using air intelligently

Air is always there but is hardly perceived consciously.

Directing air in a specific form of movement is the competence of ZIEHL-ABEGG. As the world's leading provider of fans with adapted control technology, ZIEHL-ABEGG relies on the efficiency and reliability of the products. With the trailblazing solutions from ZIEHL-ABEGG, customers use air and energy optimally for their individual requirements.

FANselect The fan selection program

With the first fully comprehensive certified fan selection program FANselect the customer can find the optimum fans and system components for his needs conveniently, precisely and quickly. The specified values conform to reality. They are determined in the ZIEHL-ABEGG InVent technology centre which houses the world's biggest combined air and noise test benches of the ventilation system branch.

More information on www.fanselect.info

The screenshot shows the FANselect software interface. At the top, there are tabs for 'watch list (78)', 'options', 'help', and 'logout'. The title 'FANselect' is centered above a search bar containing 'airflow volume 4000 m³/h', 'static pressure / total pressure 50 Pa', and 'main supply 3~ / 400V / 50Hz'. To the right of the search bar are 'selection criteria' dropdowns for 'airflow volume', 'static pressure', 'main supply', and 'ambient temperature'. Below the search bar are buttons for 'additional selection criteria', 'range', 'design', and 'search'. The main area displays a table titled '42 hits' with columns for 'article no.', 'type', 'n', 'S₁', 'P₁', 'P₂', 'P₃', 'P₄', 'P₅', 'P₆', 'P₇', 'P₈', 'P₉', 'P₁₀', 'P₁₁', 'P₁₂', 'P₁₃', 'P₁₄', 'P₁₅', Welcome to the world of ZIEHL-ABEGG

Top technology "Made by ZIEHL-ABEGG"

A pioneering spirit and the courage of innovation were the driving forces behind Emil Ziehl's development of his first external rotor motor over a hundred years ago. With this he laid the corner stone for the success story of ZIEHL-ABEGG in 1910. Today, the family company ZIEHL-ABEGG, with its headquarters in Künzelsau, develops, produces and sells high quality, high-tech components: Fans, special electric motors and their perfectly adapted, state-of-the-art control technology. Still today, Emil Ziehl's pioneering spirit is the motivator for making good even better and finding new, revolutionary solutions. ZIEHL-ABEGG is based in Southern Germany but is at home all over the world. At the worldwide production and sales sites, thousands of employees develop, produce and sell technical, economical and ecological progress.

Welcome to the world of ventilation, control and drive technology.

One-stop expertise

Fan, motor and control technology

Whether air conditioning, drying, cooling or ventilating, the efficient fans with adapted drive and control technology from ZIEHL-ABEGG cope with these tasks safely and reliably. Individual and also complex customer requirements are welcome challenges.

At ZIEHL-ABEGG headquarters in Künzelsau, more than 300 engineers and technicians concentrate daily on finding the best solution. In the InVent, one of the most modern technology centres of its kind, they work on the innovations of the future. Their ideas are put into practice by excellently trained specialists on state-of-the-art plants. The production as well as all processes are accompanied by prudent quality management. ZIEHL-ABEGG products are subjected to rigorous testing before being put into operation at the customer's. On the world's biggest air and noise test bench, vibrations and external noises are eliminated and thus ensure top class fan measurements in accordance with ISO and DIN. The result is top class products and services which are marked by the seals "Premium Quality" and "Premium Efficiency".

EC fans of the Royal League

Quiet, efficient, environmentally friendly

EC fans from ZIEHL-ABEGG unite state-of-the-art motor technology with innovative aerodynamics. This symbiosis scores high marks by merging revolutionary ECblue technology with premium fans. The result is efficiency and absolutely economical operation. The new generation of axial fans heads the ECblue technology: The FE2owlet has bionomically designed rotor blades for almost noiseless conveyance of air. Moreover, the FE2owletbio is made from 100% recyclable bio-polyamides. Further highlights of material development at ZIEHL-ABEGG are shown in the Cpro centrifugal fan with the new ZAmid® technology. The new high performance composite material is as hard as steel but only half the weight. This is kind on the bearings and saves energy. Greater efficiency also comes from the newly developed blade geometry in the centrifugal impellers which has only become possible thanks to the innovative composite material. In standard application, EC-fans achieve maximum volume flows with extraordinary efficiency despite their low noise. Together with the ECblue motors, ZIEHL-ABEGG fans achieve a dynamic response which makes them absolute leaders in environmental friendliness and efficiency.

combined with ECblue technology

AC-fans of the Royal League

Strong, robust, extraordinary

In all applications in which the material is exposed to immense stress, the AC fans from ZIEHL-ABEGG demonstrate their quality and ability. Their solid components and robust design and technology are able to withstand even the greatest stresses. The fans are therefore used in many different areas of industry or agriculture - wherever absolute insensitivity and stability is important.

The high quality motor technology is the result of decades of experience at ZIEHL-ABEGG. Intelligently used components such as the Fcontrol frequency inverter make them environmentally friendly and efficient key players. Maintenance-free and extraordinarily performant, AC fans from ZIEHL-ABEGG are a safe and rewarding investment.

AC motor technology, robust in operation

Expertise in ventilation

ErP directive

With the Kyoto protocol, the European Union pledged to reduce CO₂ emissions by at least 20 per cent by the year 2020. One measure for achieving this is the ErP directive for improved energy efficiency and general environmental compatibility of electrical equipment – also known in Germany as the Eco Design directive. It supports a resource-friendly and energy-efficient product design. With the implementation of the ErP directive, stricter efficiency requirements for fans in the output range from 125 W to 500 kW apply since 2013 and 2015 in two stages. A further stage is planned for 2020. Energy efficiency is thus given the same standing as the compliance with the low voltage or EMC directive. The system efficiency requirement is a prerequisite for a CE mark and is thus essential for a product to be used in EU member states. An own label as for refrigerators is not planned for fans because the fan manufacturers do not usually have any influence on the installation conditions.

Products for use in EU countries and world-wide markets are listed in this catalogue. For the fans for the EU countries, the respective ErP identification is included directly in the description of the fan.

The European Ventilation Industry Association (EVIA) represents the European ventilation industry with national and European institutions.

The EVIA is the key platform for fan manufacturers and is their interface to politicians, decision-makers in the European Union, and other associations that use fans in their products. The EVIA supports the use of high efficiency fans in Europe to implement the EU targets for increased efficiency.

ZIEHL-ABEGG played a leading role in its foundation and supports the EVIA with active involvement in its working groups. ZIEHL-ABEGG also provides the chairman.

Selection of fans step by step

FE2owlet

Product specification

Fluted, sickle-shaped blades based on bionic insights. Available sizes 250 - 1,250 mm, volume flow rates up to 53,750 m³/h and static pressure increase up to 418 Pa.

Properties and special features

- Low operating costs due to optimum efficiency with minimum noise levels
- High flexibility due to 100% speed controllable volume flow rate
- Very smooth running and long service life due to dynamic balancing in two levels
- Compact dimensions for every installation situation
- Compliant with ERP directive 2015
- Numerous approvals (incl. VDE, UL, CCC, EAC, CE)

Motor concepts

External rotor motors

- ECblue EC technology with integrated controller matched to the fan
- AC technology

Technical description

FE2owlet with ZAplus

Product specification

Optimised full bell mouth with guiding vane, motor suspension and short diffusor. Fluted, sickle-shaped blades based on bionic insights. Available sizes 450 - 910 mm, volume flow rates up to 36,500 m³/h and static pressure increase up to 420 Pa.

Properties and special features

- Intelligent ventilation system with built-in efficiency guarantee
- Lowest operating costs due to optimum efficiency with minimum noise levels due to bionic blade design and aerodynamically optimised ZAplus nozzle
- High level of flexibility due to 100% speed controllable volume flow rate
- High corrosion protection with corrosion-free nozzle made of high performance composite material
- Very smooth running and long service life due to dynamic balancing in two levels
- Air handling capacity possible with diffusor kit (ZAplus+)
- Minimal handling effort as no packaging needed
- Compliant with ERP directive 2015
- Numerous approvals (incl. VDE, UL, CCC, EAC, CE)

Motor concepts

External rotor motors

- ECblue EC technology with integrated controller matched to the fan
- AC technology

At www.fanselect.info, we are offering you FANselect, a selection program for axial and centrifugal fans with the matching system components.

With FANselect, you can, for instance, select and calculate the fans listed in this catalogue. FANselect provides you with an option to calculate the efficiency, the acoustics, the SFP and much more. In addition, you can also select the matching systems components. You can conveniently save your configuration in a file or print it out.

The FANselect selection program, including the customer DLL, is available for you to download at any time at www.fanselect.info.

FE2owlet-ECblue

for single phase alternating current, 200-277 V

FN025

Description

Motor technology: EC

Rated voltage U_N : 1~ 200-277 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 110 W*

Rated current I_N : 0.90-0.65 A*

Rated speed n_N : 2580 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -25 °C

Max. permitted ambient temperature $t_{R(max)}$: 60 °C

Electrical connection: Integrated controller with attached cable

Number of blades: 7

Protection class: IP44

Motor protection: Integrated active temperature management

Blades: High Performance Composit Material, uncoated, black

Rotor: Steel, powder-coated, ultramarine blue

Conformity: CE

ErP-data

Not subject to the regulations of ErP directive ($P_1 < 125$ W)

* Rated data

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

Connection diagram

FE2owlet-ECblue

for single phase alternating current, 200-277 V

FN030

Description

Motor technology: EC
Rated voltage U_{N^*} : 1~ 200-277 V*

Rated frequency f_{N^*} : 50/60 Hz*

Input power P_{sys^*} : 420 W*

Rated current I_{N^*} : 2.20- 1.55 A*

Rated speed n_{N^*} : 2750 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}^*$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}^*$: 60 °C

Electrical connection: integrated Controller

Number of blades: 7

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: High Performance Composite Material, uncoated, black

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE

ErP-data

Efficiency η_{startA} : 43.5 %

Efficiency: $N_{actual} = 52.3 / N_{target} = 40**$

EC controller integrated

Design Q - square full bell mouth, guard grille pressure side

FE2owlet-ECblue

for three phase alternating current, 380-480 V

FN045

Description

Motor technology: EC

Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 0.74 kW*

Rated current I_N : 1.35 - 1.10 A*

Rated speed n_N : 1650 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 60 °C

Electrical connection: integrated Controller

Number of blades: 5

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: High Performance Composite Material, uncoated, black

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 41.4 %

Efficiency: $N_{actual} = 48.5 / N_{target} = 40^{**}$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

Connection diagram

Design Q - square full bell mouth, guard grille pressure side

FE2owlet-ECblue

for three phase alternating current, 380-480 V

FN056

Description

Motor technology: EC

Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 1.25 kW*

Rated current I_N : 2.10- 1.65 A*

Rated speed n_N : 1450 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 60 °C

Electrical connection: integrated Controller

Number of blades: 5

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: High Performance Composite Material, uncoated, black

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 45.2 %

Efficiency: $N_{actual} = 51.0 / N_{target} = 40**$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

for three phase alternating current, 380-480 V

FN063

Description

Motor technology: EC

Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 3.70 kW*

Rated current I_N : 5.90- 4.70 A*

Rated speed n_N : 1600 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 55 °C

Electrical connection: integrated Controller

Number of blades: 7

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: Aluminium, uncoated

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 41.7 %

Efficiency: $N_{actual} = 44.5 / N_{target} = 40^{**}$

Design Q - square full bell mouth, guard grille pressure side

FE2owlet-ECblue

for three phase alternating current, 380-480 V

FN071

Description

Motor technology: EC
Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 1.95 kW*

Rated current I_N : 3.20- 2.50 A*

Rated speed n_N : 1150 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 65 °C

Electrical connection: integrated Controller

Number of blades: 7

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: Aluminium, uncoated

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 44.8 %

Efficiency: $N_{actual} = 49.5 / N_{target} = 40^{**}$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

FE2owlet-ECblue

for three phase alternating current, 380-480 V

FN080

Description

Motor technology: EC

Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 3.10 kW*

Rated current I_N : 4.80- 3.80 A*

Rated speed n_N : 1100 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 55 °C

Electrical connection: integrated Controller

Number of blades: 7

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: Aluminium, uncoated

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 46.4 %

Efficiency: $N_{actual} = 49.9 / N_{target} = 40^{**}$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

FE2owlet-ECblue

for three phase alternating current, 380-480 V

FN091

Description

Motor technology: EC
Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 3.20 kW*

Rated current I_N : 5.00- 3.90 A*

Rated speed n_N : 1100 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 50 °C

Electrical connection: integrated Controller

Number of blades: 5

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: Aluminium, uncoated

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{start} : 53.2 %

Efficiency: $N_{actual} = 56.5 / N_{target} = 40^{**}$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

Connection diagram

Max. permitted ambient temperature $t_{R(max)}$: 60 °C

Electrical connection: integrated Controller

Number of blades: 3

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: Aluminium, uncoated

Rotor: Aluminium, 1 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{start} : 47.8 %

Efficiency: $N_{actual} = 52.5 / N_{target} = 40^{**}$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801.

Connection diagram

FE2owlet

for single phase alternating current, 2 pole

FNO20-2E

Description

Motor technology: AC
Rated voltage U_N : 1~ 230 V*
Rated frequency f_N : 50 Hz* (60Hz data available)
Input power P_i : 0.08 kW*
Rated current I_N : 0.38 A*
Rated speed n_N : 2550 min⁻¹*
Starting current I_A : 0.65 A
Current increase ΔI : 0 %
Service capacitor C_{400V} : 1.5 μ F
Thermal class: THCL155*
Min. permitted ambient temperature $t_{R(min)}$: -40 °C***
Max. permitted ambient temperature $t_{R(max)}$: 60 °C
Electrical connection: Supply cable variable 45 cm
Number of blades: 7
Motor protection: thermal contact
Blades: High Performance Composite Material, uncoated, black
Rotor: Aluminium, 1 coat paint, ultramarine blue
Conformity: CE
ErP-data
Not subject to the regulations of ErP directive ($P_i < 125$ W)
* Rated data
*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -40 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

FNO25-4E

Description

Motor technology: AC
Rated voltage U_N : 1~ 230 V*
Rated frequency f_N : 50 Hz* (60Hz data available)
Input power P_i : 0.05 kW*
Rated current I_N : 0.24 A*
Rated speed n_N : 1370 min⁻¹*
Starting current I_A : 0.40 A
Current increase ΔI : 0 %
Service capacitor C_{400V} : 1.5 μ F
Thermal class: THCL155*
Min. permitted ambient temperature $t_{R(min)}$: -40 °C***
Max. permitted ambient temperature $t_{R(max)}$: 55 °C
Electrical connection: Supply cable variable 45 cm
Number of blades: 7
Motor protection: thermal contact
Blades: High Performance Composite Material, uncoated, black
Rotor: Aluminium, 1 coat paint, ultramarine blue
Conformity: CE
ErP-data
Not subject to the regulations of ErP directive ($P_i < 125$ W)
* Rated data
*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -40 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

Connection diagram

Design I - axial bolted, mounting for bell mouth flange, guard grille pressure side

Design H - pipe sockets with a flange, guard grille pressure side

FE2owlet

for single phase alternating current, 4 pole

FN035-4E

Description

Motor technology: AC

Rated voltage U_N : 1~ 230 V \pm 10 %*

Rated frequency f_N : 50 Hz* (60Hz data available)

Input power P_i : 150 W*

Rated current I_N : 0.65 A*

Rated speed n_N : 1390 min $^{-1}$ *

Starting current I_A : 2.00 A

Current increase ΔI : 35 %

Service capacitor C_{400V} : 3.0 μ F

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -25 °C

Max. permitted ambient temperature $t_{R(max)}$: 70 °C

Electrical connection: Terminal box

Number of blades: 7

Protection class: IP54

Motor protection: thermal contact

Blades: High Performance Composite Material, uncoated, black

Rotor: Aluminium, 1 coat paint, jet black

Conformity: ErP 2015, CE

ErP-data

Efficiency η_{startA} : 29.2 %

Efficiency: $N_{\text{actual}} = 40.9 / N_{\text{target}} = 40^{**}$

* Rated data

**ErP 2015

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

Connection diagram

for three phase alternating current, 8-8 pole

FN050-AD

Description

Motor technology: AC
Rated voltage U_N : 3~ 400 V (Δ/Y) $\pm 10\%$ *
Rated frequency f_N : 50 Hz* (60Hz data available)
Input power P_i : 130/80 W*
Rated current I_N : 0.30/0.15 A*
Rated speed n_N : 660/510 min⁻¹*
Starting current I_A : 0.70 / 0.22 A
Current increase ΔI : 0 %
Thermal class: THCL155*
Min. permitted ambient temperature $t_{R(min)}$: -40 °C***
Max. permitted ambient temperature $t_{R(max)}$: 70 °C
Electrical connection: Terminal box
Number of blades: 7
Protection class: IP54
Motor protection: thermal contact
Blades: Aluminium, uncoated
Rotor: Aluminium, uncoated
Conformity: CE

ErP-data

Not subject to the regulations of ErP directive ($P_i < 125$ W)

* Rated data

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -40 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

Connection diagram
for airflow direction A Page 531
for airflow direction V 1360-108XB

FN091-ND

Description

Motor technology: AC
Rated voltage U_{N^*} : 3~ 400 V (Δ/Y) $\pm 10\%$ *
Rated frequency f_{N^*} : 50 Hz* (60Hz data available)
Input power P_i : 310/190 W*
Rated current I_{N^*} : 0.83/0.39 A*
Rated speed n_{N^*} : 440/ 340 min⁻¹*

Current increase ΔI : 0 %
Thermal class: THCL155*
Min. permitted ambient temperature $t_{R(min)}$: -40 °C ***
Max. permitted ambient temperature $t_{R(max)}$: 70 °C

Electrical connection: Terminal box

Number of blades: 7

Protection class: IP54

Motor protection: thermal contact

Blades: Aluminium, uncoated

Rotor: Aluminium, uncoated

Conformity: ErP 2015, CE

ErP-data

Efficiency η_{startA} : 30.4 %
Efficiency: $N_{actual} = 40.0 / N_{target} = 40$ **

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -40 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in full bell mouth without guard grille in installation type A according to ISO 5801

for three phase alternating current, 380-480 V

ZN050

Description

Motor technology: EC

Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 0.90 kW*

Rated current I_N : 1.55 - 1.25 A*

Rated speed n_N : 1550 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 60 °C

Electrical connection: integrated Controller

Number of blades: 7

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: High Performance Composite Material, uncoated, black

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 56.3 %

Efficiency: $N_{actual} = 62.9 / N_{target} = 40**$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in ZAplus without guard grille in installation type A according to ISO 5801

Design Q - ZAplus with adapter plate, guard grille pressure side

Design H - ZAplus Flattop, guard grille pressure side

FE2owlet-ECblue with ZAplus

for three phase alternating current, 380-480 V

ZN063

Description

Motor technology: EC
Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 1.85 kW*

Rated current I_N : 3.00- 2.40 A*

Rated speed n_N : 1270 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 65 °C

Electrical connection: integrated Controller

Number of blades: 7

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: Aluminium, uncoated

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 52.8 %

Efficiency: $N_{actual} = 57.5 / N_{target} = 40^{**}$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in ZAplus without guard grille in installation type A according to ISO 5801

Design H - ZAplus Flattop, without guard grille

Design H - ZAplus Flattop, guard grille pressure side

FE2owlet-ECblue with ZAplus

for three phase alternating current, 380-480 V

ZN071

Description

Motor technology: EC
Rated voltage U_N : 3~ 380-480 V*
Rated frequency f_N : 50/60 Hz*
Input power P_{sys} : 0.84 kW*
Rated current I_N : 1.45 - 1.15 A*
Rated speed n_N : 960 min⁻¹*
Thermal class: THCL155*
Min. permitted ambient temperature $t_{R(min)}$: -35 °C***
Max. permitted ambient temperature $t_{R(max)}$: 55 °C
Electrical connection: integrated Controller
Number of blades: 7
Protection class: IP54
Motor protection: Integrated active temperature management
Blades: High Performance Composite Material, uncoated, black
Rotor: Steel, 2 coat paint, ultramarine blue
Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 54.5 %
Efficiency: $N_{actual} = 61.4 / N_{target} = 40**$
EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

FE2owlet-ECblue with ZAplus

for three phase alternating current, 380-480 V

ZN080

Description

Motor technology: EC
Rated voltage U: 3 ~ 380-480 V*
Rated frequency f: 50/60 Hz*
Motor input power P_{sys} : 1.85 kW*
Rated current I: 3.00-2.40 A*
Rated speed n_{max} : 950 Min⁻¹*
Thermal class: THCL155*
Min. permitted conveyor temperature $t_{R(min)}$: -35 °C***
Max. permitted conveyor temperature $t_{R(max)}$: 60 °C
Electrical connection: integrated Controller
Number of blades: 7
Protection class: IP54
Motor protection: Integrated active temperature management
Blades: Aluminium, uncoated
Rotor: Steel, 2 coat paint, ultramarine blue
Conformity: ErP 2015, CE, UL
ErP-data
Efficiency η_{start} : 57.4 %
Efficiency: $N_{actual} = 62.1 / N_{target} = 40^{**}$
EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in ZAplus without guard grille in installation type A according to ISO 5801

Control technology

FE2owlet-ECblue with ZAplus

for three phase alternating current, 380-480 V

ZN091

Description

Motor technology: EC
Rated voltage U_N : 3~ 380-480 V*

Rated frequency f_N : 50/60 Hz*

Input power P_{sys} : 1.90 kW*

Rated current I_N : 3.10- 2.50 A*

Rated speed n_N : 930 min⁻¹*

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -35 °C***

Max. permitted ambient temperature $t_{R(max)}$: 55 °C

Electrical connection: integrated Controller

Number of blades: 5

Protection class: IP54

Motor protection: Integrated active temperature management

Blades: Aluminium, uncoated

Rotor: Steel, 2 coat paint, ultramarine blue

Conformity: ErP 2015, CE, UL

ErP-data

Efficiency η_{startA} : 61.8 %

Efficiency: $N_{actual} = 66.5 / N_{target} = 40^{**}$

EC controller integrated

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -35 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in ZAplus without guard grille in installation type A according to ISO 5801

Type

FE2owlet with ZAplus

for single phase alternating current, 4 pole

ZN045-4E

Description

Motor technology: AC

Rated voltage U_N : 1~ 230 V ±10 %*

Rated frequency f_N : 50 Hz*

Input power P_i : 380 W*

Rated current I_N : 1.70 A*

Rated speed n_N : 1250 min⁻¹*

Starting current I_A : 3.60 A

Current increase ΔI : 5 %

Service capacitor C_{400V} : 7.0 µF

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(min)}$: -25 °C

Max. permitted ambient temperature $t_{R(max)}$: 65 °C

Electrical connection: Terminal box

Number of blades: 7

Protection class: IP44

Motor protection: thermal contact

Blades: High Performance Composite Material, uncoated, black

Rotor: Aluminium, 1 coat paint, jet black

Conformity: ErP 2015, CE

ErP-data

Efficiency η_{static} : 34.5 %

Efficiency: $N_{\text{actual}} = 43.6 / N_{\text{target}} = 40^{**}$

* Rated data

**ErP 2015

Description

Motor technology: AC
Rated voltage U_N : 3~ 400 V (Δ/Y) $\pm 10\%$ *
Rated frequency f_N : 50 Hz* (60Hz data available)
Input power P_i : 0.35/0.22 kW*
Rated current I_N : 0.64/0.35 A*
Rated speed n_N : 1260/ 950 min⁻¹
Starting current I_A : 1.90 / 0.65 A
Current increase ΔI : 0 %
Thermal class: THCL155*
Min. permitted ambient temperature $t_{R(min)}$: -40 °C***
Max. permitted ambient temperature $t_{R(max)}$: 70 °C

Electrical connection: Terminal box
Number of blades: 7
Protection class: IP44
Motor protection: thermal contact
Blades: High Performance Composite Material, uncoated, black
Rotor: Aluminium, 1 coat paint, jet black
Conformity: ErP 2015, CE

ErP-data
Efficiency η_{startA} : 38.5 %
Efficiency: $N_{actual} = 47.9 / N_{target} = 40^{**}$
* Rated data
**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -40 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

ZN063-VD

Description

Motor technology: AC

Rated voltage U_{N^*} : 3~ 400 V (Δ/Y) $\pm 10\%$ *

Rated frequency f_{N^*} : 50 Hz*

Input power P_i : 2.70/1.75 kW*

Rated current I_{N^*} : 5.00/2.90 A*

Rated speed n_{N^*} : 1330/1040 min⁻¹*

Starting current I_A : 19.00 / 6.00 A

Current increase ΔI : 5 %

Thermal class: THCL155*

Min. permitted ambient temperature $t_{R(\min)}^*$: -40 °C ***

Max. permitted ambient temperature $t_{R(\max)}^*$: 60 °C

Electrical connection: Terminal box

Number of blades: 7

Protection class: IP54

Motor protection: thermal contact

Blades: Aluminium, uncoated

Rotor: Aluminium, uncoated

Conformity: ErP 2015, CE

ErP-data

Efficiency η_{startA} : 43.1 %

Efficiency: $N_{\text{actual}} = 46.8 / N_{\text{target}} = 40^{**}$

* Rated data

**ErP 2015

*** Continuous operation with occasional starts (S1) according to DIN EN 60034-1:2011-02. Occasional starting between -40 °C and -25 °C is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Characteristic curve

Measured in ZAplus without guard grille in installation type A according to ISO 5801

Appendix

Guiding vane

for airflow direction V and pressure side guard grille

Guiding vane

Guiding vane mounted
on fan

Description

Range: FE2owlet (see type key FN)
Application range: for improvement of the long flow-range behaviour
Applications: Evaporators, condensers, cold storage, etc.

Advantages:

- Increased throw distance
- Avoidance of "thermal short circuit"
- Minimal pressure losses
- Easy to connect
- Fast retrofitting

Special guiding vane

Material: Polyamide PA6 GF30, UL-listed
Permissible ambient temperature: -30 °C...70 °C
Mounting: Clip onto the frame support grate

ZAplus+

Diffusor on ZAplus for greater air flow rate in the lower pressure range

Increase in air flow rate ZAplus+ vs ZAplus

Description

Applications with low pressure losses (including Microchannel)
Sizes: ZN050, ZN063, ZN080 and ZN091
Diffusor: Black-coated metal sheet
Guard grille: Black-coated steel wire
Authorised ambient temperature: -50°C...80°C
Assembly: Screwed to ZAplus

The installation kit includes:

2 diffusor halves
1 guard grille
1 fastening kit
1 assembly instructions

Advantages:

- Noise level improved by up to 4.5 dB(A)
- Acoustic directivity
- Increased air handling capacity
- Easy to retrofit
- Energy optimisation
- Lower operating costs
- 100% recyclable
- Complies with ErP 2015

Optimized Sound Emission with ZAplus+

Acoustic directivity = reduced centrifugal sound emission

Sound emission with ZAplus mainly vertical. Lower noise for your neighbour

ZAplus Heater

Technical characteristics

Aluminium Heater

Rated voltage U_N : 1 200-250 V

Rated frequency f_N : 50/60 Hz

Approval CE

1 m cold tail insulated

60° C thermostat

80° C safety limiter

Adhesive backside on the whole surface

Additional adhesive over perimeter length for legendary fixing on itself

This way of fixing warrenties a better contact and so better heat exchange efficiency

As an option there is an isolation jacket available. Herewith the loss of heat can be minimized.

Terminal box

K52

Description

Material: PC/ABS blend

Protection class: IP55

Max. rated voltage: 500 V

Available with European terminal strip 2.5 mm² with wire protection. Capacitor for single phase AC up to 16 µF, 400 V can be fitted. With two plastic cable glands M20 x 1.5 with seal.

Attention: Metall cable glands must not be used for plastic terminal boxes!

The hole in the bottom must be closed / sealed by the customer.

Selection criteria for control devices

ZIEHL-ABEGG is the only fan manufacturer who develops its own methods for changing the speed of fans and produces the controllers for this:

- voltage controllers
- frequency inverters
- EC controllers

It is not general solutions which bring the decisive advantage in a special application. It is far more the criteria related to a system which are to be considered and which therefore lead to the best result. ZIEHL-ABEGG gives you neutral advice. The most suitable control procedure is chosen according to the system-related criteria. The following criteria are decisive for the selection of the right controller:

- control variable
- motor noises
- economy

Control variable

Basically it is a case of whether you want to implement an open control circuit (only one speed controller which operates based on a setting signal) or a closed control circuit (independent control to a physical variable, e.g. temperature, pressure, etc., in connection with appropriate sensors). In our program you will find controllers which operate only as speed controllers and versions which control processes independently, sometimes with extensive additional functions. We also supply the necessary sensors.

Sensors for process control:

Pressure sensor
MBG-301

Temperature sensors
TF...

Air velocity sensors
MAL...

Pressure sensor
MPG... (gases)

Combined sensor for
CO₂, humidity, tem-
perature

Quiet motor operation

Depending on the application, different requirements are placed on low noise emission by the control method. For instance, due to its very low investment cost, electronic voltage control is very popular. However, electromagnetic excitation can arise due to the principle of phase-cut control, causing humming noises in the motors. As these excitations can be further amplified through resonances throughout the entire device, it is recommended to fall back on the control method (as early as in the planning stages), which does not cause electromagnetic excitation in the motors when these are to be used in noise-sensitive areas.

For 1~ alternating current fans, 1~ Fcontrol frequency inverters are available.

In the 3~ area, the noise filter GFD is available for voltage control devices as an accessory. Alternatively, these components can also be retrofitted. As another option, we recommend using the Fcontrol frequency inverter (3~) or EC technology as these systems work without the inference of electromagnetic motor noises.

Control devices for noiseless speed control:

Frequency inverter
Fcontrol

EC-controller Econtrol

ECblue fan with inte-
grated EC controller

Cost effectiveness

In addition to the investment costs, it is absolutely essential to take the energy costs incurred during the service life into account for an assessment of the control system. Voltage control units are very favourable in terms of their investment costs for instance. The Fcontrol frequency inverters or ECblue fans have clear advantages in comparison with voltage control.

Options for speed control

Speed control with frequency inverter

We specifically developed frequency inverters for trouble-free, quiet and cost-effective speed control of fans in parallel operation.

Fcontrol frequency inverter

Our Fcontrol frequency inverters with integrated, all pole effective sine filters enable parallel operation without placing restrictions on the cable lengths and without using shielded motor cables. The frequency inverters have stored, selectable operating modes, e.g. for refrigeration, air-conditioning and clean room technology along with agricultural applications.

Fcontrols can also be supplied for controlling pumps and for compressors.

The advantages of the Fcontrol frequency inverter:

- Speed control without electromagnetic motor noises
- Motors are not exposed to risk
- Operation without shielded motor cables
- No restriction during parallel operation of motors on the Fcontrol
- Very energy efficient
- The motor cable lengths are not restricted by Fcontrol
- Universal control functions are already integrated

Frequency inverter Fcontrol

Speed control with voltage control devices

ZIEHL-ABEGG offers a comprehensive product range of electronic voltage control devices for continuously adjustable speed control of voltage controllable 3~ and 1~ fans. From simple devices (control through potentiometer) up to multifunction devices with display can be used for numerous applications. Multifunction devices have selectable operating modes already stored, e.g. for refrigeration, air-conditioning, clean room technology and even for agricultural applications.

Since when using the principle of phase-cut control electromagnetic noises can arise in the motors, we recommend the Fcontrol frequency inverter for noise-sensitive applications.

The advantages of electronic voltage control:

- Reasonably priced investment
- Universal control functions are already integrated

Important when selecting devices:

A voltage drop can lead to an increase of the current consumption on the motor. Please take this into consideration with a current reserve when designing voltage control devices. In this connection please note the technical data of the fans, especially regarding the statement of ΔI .

Basic 1~ voltage control device

Universal 3~ voltage control device

Speed control with transformers

Voltage controllable fans can have their speed changed by using transformers. For this purpose, we supply individual transformers (e.g. installation in switch cabinets) and complete transformer-based controllers with 5-step switch with various equipment:

- Control devices with and without integrated motor protection function
- Control devices with additional contacts and additional functions

The advantages of transformer-based speed control:

- Simple, robust technology
- No electromagnetic motor noises

Transformer-based 5-stage control devices for 1~ and 3~

Motor protection concept

The majority of ZIEHL-ABEGG external rotor motors (excluding ex-motors) are equipped with "TB" thermostats.

Standard protective switches or bi-metal actuators in the motor feed line work dependent of current and thus offer only incomplete protection as the current does not allow conclusions to be made about the motor winding temperature under all conditions.

In contrast, thermostats are bimetal switches embedded in the motor winding and they can react directly to the motor's winding temperature. They open an electrical contact, as soon as their nominal switch temperature (NST) is attained.

Thermal contact

Fans can be securely protected by ZIEHL-ABEGG motor protection devices. Especially when they are

- speed controlled by voltage,
- operated with excessive switching frequency,
- when they are stalled,
- or exposed to high ambient temperatures.

Thermostats must be connected in the control circuit so that during a malfunction the fans are not independently reconnected after cooling off. ZIEHL-ABEGG devices meet these conditions. Mutual protection of several motors is possible with one protection device. In order to do this, the temperature protectors of the individual motors have to be connected in series. Please pay attention to the fact that all motors are disconnected at the same time in case of a temperature failure in a single motor. In real life applications, motors are grouped, so in case one motor fails it is still possible to run in emergency mode with reduced power.

To ensure optimum motor protection we provide motor protection units in various designs.

Motor protection units for 3~ motors

The STDT motor protection units for 3~ motors combine several functions:

The motor is primarily protected by "TB" thermostat monitoring. This ensures direct monitoring of the winding temperature. On top of that, the STDT has an integrated overcurrent release that protects the lead to the motor from overcurrent. This feature - plus the integrated double terminals- allow the STDT to be used like a "current distribution" of sorts.

Motor protection units and system components

Application example with 3 ~ motor protection units as "current distribution"

Network or control devices output

Single fans or groups of fans protected by thermostats

Motor protection units for 1~ motors

In the 1~ motor protection units, it is intended that each motor is allocated one motor protection device. Motor protection is also carried out using "TB" thermostat monitoring.

Monitor unit for thermistors

Our U-EK monitor device is available for monitoring "TP" thermistors, which are also approved for monitoring Ex-protected motors (ATEX approval).

Motor protection and switchgear

For speed selecting motors in which the motor windings are intended for this, we supply the switchgear with integrated monitoring functions for the "TB" thermostats.

Monitoring device U-EK230E for thermistor

Control modules

UNIcon universal control module (with MODBUS Master function)

All ZIEHL-ABEGG sensors can be combined with the UNIcon CXE/A(E) universal control module. The actual value measured at the sensor is compared with the setpoint. This results in the 0-10 V output signal. Two 0-10 V outputs are integrated. These serve to activate EC fans, frequency inverters or other devices. Optionally, connected field devices (frequency inverters/EC fans with plugged MODBUS add-on module) can be activated by the integrated MODBUS-RTU interface (MODBUS Master function). Groups of frequency inverters or ECblue fans can be conveniently addressed quickly and automatically. The device also contains two separate control circuits, a real time clock and timer functions. UNIcon universal control modules are especially suitable for the following applications: Refrigeration, air conditioning, general ventilation tasks, clean room technology. For typical applications in the areas mentioned, fast start-up is possible by selecting pre-programmed operating modes.

We supply special control modules for agriculture.

Input for sensors or speed settings through

Setting of the desired speed through device or by external default, e.g. 0...10 V

Connecting pressure sensors (refrigeration), e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors, e. g. sensors type TF.. e. g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning), e.g. type DSG.. sensors, measuring range 0...6000 Pa, acquisition of volume flows up to 65000 m³/h

Connecting air velocity sensors, e.g. type MAL.. sensors, measuring range 0...1 m/s, 0...10 m/s

Connecting additional sensors, e.g. combination sensors, CO₂, sensor signal 0...10 V / 0...20 mA / 4...20 mA

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

Multifunction display with clear text display:
Different menu languages are selectable

Simple commissioning by operating modes:

Typical operating modes, e.g. for air-conditioning, refrigeration or ventilation technology can be selected.

Simple programmability:

e. g. setting of a minimum speed, limitation of the maximum speed, inversions and limits.

Setting, e.g. for 2-step mode

2 analog inputs for sensors or setting signals:

Analog input E1 and E2: Setting by operating modes or manually programmable, e.g. 0-10 V, 0-20 mA, 4-20 mA

Analog input E2: programmable, e.g. comparison with sensor 1, difference to sensor 1, average value formation, setpoint setting, setpoint adaptation (e.g. outside temperature-dependent)

2 digital inputs D1, D2:

Programmable, e.g. enable, switch over setpoint 1 or 2, switch over control or manual mode, switch over E1 or E2, control function reversal, output limitation, display of external fault

2 analog outputs for controlling external speed controllers, EC fans, other devices:

Analog output A1 and A2: Setting by operating modes or manually programmable, e.g. output signal proportional to modulation, output signal proportional to input signal, invertible, 10 V constant voltage, group control

2 digital outputs (relays) K1 and K2:

Setting by operating modes or manually programmable, e.g. operating indication, fault indication, limits, external fault at digital input, activation of external devices, e.g. heating, group control fans, etc.

2 interfaces RS485:

a) For connecting ZIEHL-ABEGG field devices with MODBUS RTU interface (e.g. field devices with integrated add-on module "AM-MODBUS"). With the possibility of automatic addressing of these field devices.

b) MODBUS Slave function of the UNIcon, for connection to a master control station (GLT).

Set protection/memory for settings:

Activation of set protection against unauthorised access, restoration of made settings

Event memory:

Query of occurred events, operating times etc.

Integrated real-time clock with timer:

The timer function behaves like a digital input, the desired function can be selected accordingly. Up to four switching times per day can be set for the desired function.

Control modules

UNIcon sensor control module for pressure

The sensor control module for pressure measures and displays the pressure, for instance in refrigeration circuits. Depending on the desired setpoint and control range, the sensor control module generates 0-10 V to control the EC fan or, for example, a frequency inverter.

The sensor control module is supplied with 10 V DC from the fan or frequency inverter that it controls. No additional supply voltage is required.

Input for sensors or speed settings through

Pressure sensor and control intelligence are combined in one device

Connection diagram

Equipment/properties:**Analog pressure display for measured actual value:**

Device versions for 0-30 bar and 0-50 bar are available
Display of the system pressure also without energy supply
A second scale shows the pressure in PSI

Setting of the desired system pressure by integrated potentiometer:

Version 0-30 bar: Setpoint 6-21 bar settable
Version 0-50 bar: Setpoint 10-35 bar settable

Setting of the desired control range by integrated potentiometer:

Version 0-30 bar: Control range 3-9 bar settable
Version 0-50 bar: Control range 5-15 bar settable

Extended, 3-wire cable approx. 2 m:

1 x output 0-10 V: for controlling EC fans, frequency inverters, other devices
1 x supply with 10 V DC: From the connected EC fan, frequency inverter, other device
1 x GND

Application/Function

The sensor control module is screwed through a female thread with the Schrader valve directly onto the refrigerant circuit on the condenser outlet.

Under the influence of pressure, an integrated elastic tube spring measuring element deforms. The measured pressure can be read immediately.

Through a Hall sensor, the deformation is transmitted non-contact and wear-free to the integrated control electronics. An automatic alignment with the measured value is made through the facility of being able to set the desired pressure in the plant with a potentiometer on the unit. The consequential 0-10 V signal controls connected EC fans, frequency inverters or other devices.

Suitable for all refrigerants except NH₃

Control modules

UNIcon sensor control module for differential pressure/air flow (2nd edition)

Input for sensors or speed settings through

Pressure sensor and control intelligence are combined in one device

Air flow sensor (by input of K-factor) and control intelligence are combined in one device

The sensor control module for differential pressure and volume flow measures and indicates the pressure or, optionally, the volume flow in a ventilation system. The calculation of the volume flow is performed by entering the K-factor of the fan inlet ring.

Depending on the desired setpoint value and control range, the sensor control module generates 0-10 V to control the EC fan or e.g., a frequency inverter.

The sensor control module is supplied by the fan or frequency inverter which it controls, e.g., with 10-24 V DC. No additional supply voltage is necessary.

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

Integrated display:

For pressure or volumetric air flow display and for programming
It is possible to switch over the display from SI units to Imperial units.

A zero point calibration of the integrated sensor is possible into the menu of the unit.

Simple commissioning by operating modes:

Operation as pressure or volumetric air flow sensor
Operation as pressure or volumetric air flow controller

Simple programmability by 3 buttons:

Selection of measuring range, input of setpoints (1/2),
Control range, K-factor for volumetric air flow determination,
minimum or maximum output signal.

Different measuring ranges can be selected depending on the version:

CPG-200AV: 0-50 / 100 / 150 / 200 Pa
CPG-1000AV: 0-200 / 300 / 500 / 1000 Pa
CPG-6000AV: 0-2000 / 3000 / 4000 / 6000 Pa
Maximum air flow measuring range: 65,000 m³/h

Voltage input for switch over:

Setpoint 1 or 2

1 analog output:

For activation of EC fans, frequency inverters, other devices

Application/Function

The sensor control module is connected to the ventilation system via 2 pressure ports (pressure socket + and -).

The differential pressure registered on the ventilation system affects the sensor on a silicone membrane in the device. The deformation of the membrane is registered through a measuring element and transmitted to the integrated electronics. Function: Pressure rise on +, compared to pressure on - connection.

Optionally, the device can be operated as a pressure sensor, i.e., pressure indicator and proportional output signal 0-10 V corresponding to the set measurement range.

Optional operation as a volume flow sensor, i.e. volume flow (by entering the K-factor of the centrifugal fans) and 0-10 V proportional output signal corresponding to the set measurement range.

Optional operation as a control module for pressure or volume flow. The entered setpoint is compared to the actual value; the 0-10 V output signal results from that. That is used to trigger EC fans, frequency inverters or other devices.

Add-on modules

AM-MODBUS (-W) for Basic Frequency inverter and ECblue

Pluggable add-on modules for function extension of the "Icontrol Basic" and "Fcontrol Basic" frequency inverters without integrated display as well as ECblue motors and fans.

With the AM-MODBUS/-W add-on modules, the devices integrated into MODBUS networks or the A-G-247NW operator terminal can be connected. Parameterization and data polling by radio (with AM-MODBUS-W) are optionally possible.

Whole groups of frequency inverters or ECblue motors and fans that are equipped with these AM-MODBUS add-on modules can be addressed quickly and automatically by a ZIEHL-ABEGG UNIcon control module with MODBUS-Master function. These devices are then controlled conveniently by the UNIcon "master" device.

Equipment/properties

2 x interface RS485:

For integration into a MODBUS RTU network (MODBUS Slave). With the possibility of automatic addressing by a UNIcon control module with MODBUS-Master function.

Add-on modules

AM-PREMIUM (-W) for Basic Frequency inverter and ECblue

Pluggable add-on modules for function extension of the "Icontrol Basic" and "Fcontrol Basic" frequency inverters without integrated display as well as ECblue motors and fans.

With the AM-PREMIUM/-W add-on modules, the devices can be functionally extended as a control unit. In addition, it is possible to link to MODBUS networks or connect operator terminals (A-G-247NW / AXG-1A / AXG-1AE). Radio parameterization and data polling (with AM-PREMIUM-W) is also possible as an option.

Input for sensors or speed settings through

Setting of the desired speed through device or by external default,
e.g. 0...10 V

Connecting pressure sensors (refrigeration),
e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors,
e. g. sensors type TF..
e. g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning),
e.g. type DSG.. sensors, measuring range 0...6000 Pa,
acquisition of volume flows up to 65000 m³/h

Connecting air velocity sensors,
e.g. type MAL.. sensors, measuring range 0...1 m/s, 0...10 m/s

Connecting additional sensors,
e.g. combination sensors, CO₂,
sensor signal 0...10 V / 0...20 mA / 4...20 mA

Connection diagram

Equipment/properties

Simple start-up by operating modes:

When an operator terminal is connected to the AM-PREMIUM add-on module plugged into the frequency inverter (for AM-PREMIUM-W via radio), typical operating modes, e.g. for air conditioning, refrigerant or ventilation technology can be selected.

2 analog inputs for sensors or setting signals:

analog input E2 and E3: Setting by operating modes or manually programmable, e.g. 0-10 V, 0,20 mA, 4-20 mA

analog input E3: Programmable, e.g. comparison with sensor E2, difference to sensor E2, average value formation, setpoint setting, setpoint adaptation (e.g. outdoor temperature-dependent) connection of passive thermistors: On E2 and T2, E3 and T3.

1 analog output A1:

Setting by operating modes or manually programmable, e.g. output signal proportional to modulation, output signal proportional to input signal, invertible, 10 V constant voltage, group control.

Functional extension: Digital input D1 in the basic device:

programmable, e.g. enable, switch over setpoint 1 or 2, switch over control or manual mode, switch over E1 or E3, control function inversion, output limitation, external fault, reset, reversal of direction of rotation.

Functional extension: Digital output K1 in the basic device:

setting by operating modes or manually programmable, e.g. operating indication, fault indication, limits, external fault at digital input, activation of external devices, e.g. heating, shutters, group control fans, etc.

Display and operator terminal

For frequency inverter without integrated display and ECblue

Display and operator terminal for parameterization and operation of the basic frequency inverters "Icontrol Basic" and "Fcontrol Basic" as well as ECblue motors an fans.

The basic frequency inverters without integrated display and ECblue motors have a slot for the AM-PREMIUM add-on modules. By plugging the add-on modules, the AXG-1A(E) operator terminal or the A-G-247NW hand held terminal can be connected.

The display and operator terminal AXG-1A can be installed flexibly in plants or machines in the IP54 housing. Alternatively, a unit for control panel integration is available (AXG-1AE). The + 24 V voltage supply comes from the frequency inverter, a separate mains supply is not required.

Connection diagram

① Voltage supply

Frequency inverters

1~ Fcontrol, universal controller with display and bypass main switch

Input for sensors or speed settings through

Setting of the desired speed through device or by external default, e.g. 0...10 V

Connecting pressure sensors (refrigeration), e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors, e.g. sensors type TF.., e.g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning), e.g. type DSG.. sensors, measuring range 0...6000 Pa, acquisition of volume flows up to 65000 m³/h

Connecting air velocity sensors, e.g. type MAL.. sensors, measuring range 0...1 m/s, 0...10 m/s

Connecting additional sensors, e.g. combination sensors, CO₂, sensor signal 0...10 V / 0...20 mA / 4...20 mA

The Fcontrol frequency inverters provide special advantages. Fcontrols have an all pole effective sine filter integrated which provides sinusoidal output voltage that is comparable with the standard mains. That means the frequency inverter enables reliable, demand-oriented and energy-saving control of asynchronous motors (external rotor motors, IEC standard motors) without having to take measures into consideration required by standard frequency inverters.

The advantages provided by the Fcontrol frequency inverter are:

- Operation without shielded motor feed lines
- The line length is not restricted by Fcontrol
- Operation without electromagnetic motor noises (ideal for noise sensitive areas)
- No risk to motors (they do not have to be frequency inverter compatible) since they are supplied with sinusoidal voltage that corresponds to the line voltage.

The benefits are especially advantageous in plants in which motors or fans are operated in parallel on a frequency inverter. Motors connected in parallel often means long cable lengths which is no problem with the Fcontrol. On top of that, unshielded cables can be used.

The Fcontrol universal devices are ideal for the following applications: refrigeration, air conditioning, agriculture, general air supply and ventilation tasks, clean room technology.

Fast commissioning for typical applications in the stated sectors by selecting pre-programmed operating modes possible.

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
 Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

Integrated all-pole effective sine filter

Phase to phase and phase to PE conductor. Thus sinusoidal output voltage. Frequency inverter typical measures such as shielded motor cables are not necessary.

Integrated PFC (Power Factor Controller)

Active power factor adaptation for sinusoidal current consumption. Therefore low line feedback.

Integrated main switch with bypass function

Switch positions: Auto (for control mode), 0 and 100 % (100 % means that the integrated device electronics are bypassed, the applied line voltage is switched to the output).

LC multifunction display with clear text display:

Different menu languages are selectable

Simple commissioning by operating modes:

Typical operating modes, e.g. for air conditioning, refrigeration or ventilation technology can be selected.

Simple programmability:

Typical settings can be made easily: e.g. setting of a minimum speed, limitation of the maximum speed, inversions and limits. Setting, e.g. for 2-step mode

2 analog inputs for sensors or setting signals:

Analog input E1 and E2: Setting by operating modes or manually programmable, e.g. 0-10 V, 0-20 mA, 4-20 mA
 analog input E2: programmable, e.g. comparison with sensor 1, difference to sensor 1, average value formation, setpoint setting, setpoint adaptation (e.g. outside temperature-dependent)

2 digital inputs D1 and D2:

Programmable, e.g. enable, switch over setpoint 1 or 2, switch over control or manual mode, switch over E1 or E2, control function reversal, output limitation, display of external fault, reset, direction of rotation reversal

1 analog output A1:

Setting by operating modes or manually programmable, e.g. output signal proportional to modulation, output signal proportional to input signal, invertible, 10 V constant voltage, group control

2 digital outputs (relays) K1 and K2:

Setting by operating modes or manually programmable, e.g. operating indication, fault indication, limits, external fault at digital output, activation of external devices, e.g. heating, shutters, group control fans, etc.

Integrated motor protection function:

Connection possibility for thermostats TB

Interface RS485 MODBUS RTU:

Integration into bus system

Set protection / memory for settings:

Activation of set protection against unauthorised access, restoration of made settings

Event memory:

Querying of occurred events, operating times, etc.

Fcontrol, universal controller with display and bypass main switch

1~ 208...277V 50/60Hz

FXET10AMQ	308136		10	50	16	187	55		6.80	250 x 302 x 212

Devices with a rated temperature below 55 °C can be used up to 55 °C with a reduction in performance.

Frequency inverters

1~ Fcontrol, temperature controller with display and bypass main switch

The 1~ Fcontrol frequency inverters with all-pole effective sine filter are available in the version as a temperature control unit. A TFR type temperature sensor (room temperature sensor IP54) is contained in the scope of supply. The frequency inverters control asynchronous motors (external rotor motors, IEC standard motors) gently, requirement-based and energy saving.

Advantages achieved by Fcontrol frequency inverters are:

- High energy saving
- Operation without shielded motor cables
- The cable length is not limited by the Fcontrol
- Operation without electromagnetic motor noises (ideal for noise sensitive areas)
- No danger to motors (these must not be suitable for frequency inverters) because they are supplied with sinusoidal voltage according to the mains voltage.

The 1~ Fcontrol temperature control units are especially suitable for the following applications: Agriculture, general ventilation tasks. Fast commissioning is possible by presetting the devices including the integrated inputs and outputs.

Input for sensors or speed settings through

Type	Article no.	Rated voltage	Rated current	Rated temperature	Max. line fuse	Max. heat dissipation	Maximum ambient temperature	Protection class	Weight	Dimensions (W x H x D)
		V	A	°C	A	W	°C		kg	mm
FTET4AHMQ	308131	230	4	35	6	65	55	IP54	3.40	240 x 284 x 132
FTET6AHMQ	308132		6	40	10	103	55		5.70	250 x 302 x 212
FTET10AH-MQ	308133		10	50	16	187	55		6.80	250 x 302 x 212

Devices with a rated temperature below 55 °C can be used up to 55 °C with a reduction in performance.

Frequency inverters

1~ Fcontrol, speed controller optional with bypass main switch

Input for sensors or speed settings through

Setting of the desired speed through device or by external default,
e.g. 0...10 V

The 1~ Fcontrol frequency inverters with all-pole effective sine filter are available in the version as speed controllers. There is an optional version with integrated main switch (Auto – 0 – 100%).

The speed setting can be made by a master control by 0 – 10 V, e.g. by a ZIEHL-ABEGG control module of the UNIcon series. The speed can also be set manually by connecting a potentiometer. Two-stage operation with adjustable speeds is possible optionally. The frequency inverters control asynchronous motors (external rotor motors, IEC standard motors) gently, requirement-based and energy saving.

Advantages achieved by Fcontrol frequency inverters are:

- High energy saving
- Operation without shielded motor cables
- The cable length is not limited by the Fcontrol
- Operation without electromagnetic motor noises (ideal for noise sensitive areas)
- No danger to motors (these must not be suitable for frequency inverters) because they are supplied with sinusoidal voltage according to the mains voltage.

The 1~ Fcontrol speed controllers are universally suitable for many different applications: E.g. refrigerant technology, air conditioning, agriculture, general ventilation tasks, clean room technology.

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment / Characteristics

Integrated all pole effective sine filter

Phase to phase and phase to grounded conductor thus producing sinusoidal output voltage. Typical measures for frequency inverters such as shielded motor feeder cables are not necessary.

Integrated PFC (Power Factor Controller)

Active power factor adaptation for sinusoidal current consumption, resulting in lower harmonic current emissions.

1 analogue input for speed preset

Input E1 for 0-10 V setpoint signal or 10-0 V depending on device version

1 digital input

Input D1 for enable (standby), for external reset (motor fault)

1 digital output (relay)

Floating change-over contact for error message

Integrated motor protection function

Connection facility for "TB" thermostat

Optional equipment

Devices with integrated bypass main switch

Switch positions:

Auto (for speed control mode), 0 and 100% (100% = the integrated device electronics are bypassed, the applied line voltage is switched to the output)

	FSET10MQ	308250		10	50	16	187	55		6.70	250 x 302 x 212

Devices with a rated temperature below 55 °C can be used up to 55 °C with a reduction in performance.

Frequency inverters

3~ Fcontrol, universal controller with display

Input for sensors or speed settings through

Setting of the desired speed through device or by external default, e.g. 0...10 V

Connecting pressure sensors (refrigeration), e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors, e. g. sensors type TF.. e. g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning), e.g. type DSG.. sensors, measuring range 0...6000 Pa, acquisition of volume flows up to 65000 m³/h

Connecting air velocity sensors, e.g. type MAL.. sensors, measuring range 0...1 m/s, 0...10 m/s

Connecting additional sensors, e.g. combination sensors, CO₂, sensor signal 0...10 V / 0...20 mA / 4...20 mA

The Fcontrol frequency inverters provide special advantages. Fcontrols have an all pole effective sine filter integrated which provides sinusoidal output voltage that is comparable with the standard mains. That means the frequency inverter enables reliable, demand-oriented and energy-saving control of asynchronous motors (external rotor motors, IEC standard motors) without having to take measures into consideration required by standard frequency inverters.

The advantages provided by the Fcontrol frequency inverter are:

- Operation without shielded motor feed lines
- The line length is not restricted by Fcontrol
- Operation without electromagnetic motor noises (ideal for noise sensitive areas)
- No risk to motors (they do not have to be frequency inverter compatible) since they are supplied with sinusoidal voltage that corresponds to the line voltage.

The benefits are especially advantageous in plants in which motors or fans are operated in parallel on a frequency inverter. Motors connected in parallel often means long cable lengths which is no problem with the Fcontrol. On top of that, unshielded cables can be used.

The Fcontrol universal devices are ideal for the following applications: refrigeration, air conditioning, agriculture, general air supply and ventilation tasks, clean room technology.

Fast commissioning for typical applications in the stated sectors by selecting pre-programmed operating modes possible.

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment/Characteristics

Integrated all pole effective sine filter

Phase to phase and phase to grounded conductor which means sinusoidal output voltage. Measures typical for frequency inverters such as shielded motor feed lines are not required.

LC-multiplex display with plain text:

Various menu languages can be selected

Simple commissioning through operating modes:

Typical operating modes, e.g. for air-conditioning, refrigeration or ventilation technology can be selected.

Easy to program:

Typical settings can be made: e.g., default a minimum speed, limit the maximum speed, inverting and limits. Setting, e.g. for 2-stage mode

2 analogue inputs for sensors or setpoint signals:

Analogue input E1 and E2: Setting through operating modes or manually programmable, e.g. 0-10 V, 0-20 mA, 4-20 mA
Analogue input E2: programmable, e.g. comparison to Sensor 1, difference to Sensor 1, average calculation, setpoint input, setpoint adjustment (e.g. dependent on outdoor temperature)

Two digital inputs. D2 and D1:

Programmable, e.g. enable, switchover Setpoint 2 or 1 switchover control or manual operation, switchover E2, or E2, reverse control function, limit output, display external fault, reset, reverse the rotary direction

2, analogue output A1:

Setting through operating modes or manually programmable, e.g., output signal proportional modulation, output signal proportional input signal, invertible, 10 V constant voltage, group control

10 digital outputs (relays) K1 and K2:

Setting through operating modes or manual programming, e.g. operating status, limits, external fault on digital input, enabling external devices, e.g. heating, dampers, group control of fans, etc.

Integrated motor protection function:

Connection facility for PTC thermistors or alternatively thermostats (TB or TP).

Interface RS485 MODBUS RTU:

Integration into bus system

Setting protection / memory for settings:

Enable settings protection from unauthorised access, restore implemented settings

Event memory:

Query events that have occurred, operating times, etc.

Optional equipment

Add-on modules for frequency inverters

- IO add-on module type Z-module, Article No. **380052**

If the integrated inputs and outputs are not sufficient, other inputs and outputs can be created with the Z-Modul-B. These are also programmable:

- 1 analog input
- 1 analog output
- 3 digital inputs
- 2 digital outputs (relays)

- LON® Add-on module type Z-Modul-L, Article No. **380086**

For integration into a bus system LON® by a two-wire

Frequency inverters

3~ Fcontrol, universal device with display (2nd edition)

Input for sensors or speed settings through

Setting of the desired speed through device or by external default, e.g. 0...10 V

Connecting pressure sensors (refrigeration), e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors, e.g. sensors type TF.. e.g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning), e.g. type DSG.. sensors, measuring range 0...6000 Pa, acquisition of volume flows up to 65000 m³/h

Connecting air velocity sensors, e.g. type MAL.. sensors, measuring range 0...1 m/s, 0...10 m/s

Connecting additional sensors, e.g. combination sensors, CO₂, sensor signal 0...10 V / 0...20 mA / 4...20 mA

Connection diagram

The Fcontrol frequency inverters offer special benefits. Fcontrol have an integrated all-pole active sine filter which ensures a sinusoidal output voltage which is comparable with the normal supply network. This means that the frequency inverters enable reliable, requirement-based, energy-saving control of asynchronous motors (external rotor motors, IEC standard motors) without needing to consider measures that must be observed with standard frequency inverters.

Advantages provided by Fcontrol frequency inverters are:

- Operation without shielded motor cables
- The cable length is not limited by the Fcontrol
- Operation without electromagnetic motor noises (ideal for noise-sensitive areas)
- No danger for motors (these need not be frequency inverter compatible) because they are supplied by sinusoidal voltage according to the line voltage.

Especially in systems in which motors or fans are operated parallel to a frequency inverter, the advantages are particularly valuable. Parallel connected motors often mean long cable lengths, this is no problem with the Fcontrol and unshielded cables can also be used.

The Fcontrol universal devices are especially suitable for the following applications: refrigeration, air-conditioning, agriculture, general airing and venting tasks, clean-room application.

For typical applications in the named areas, fast commissioning by selecting pre-programmed operating modes is possible.

Frequency inverters of the 2nd edition enable modern operation by capacitive keys.

This means that no mechanical key is pressed but the operation is capacitive by touching the key surface. In addition there is a directly selectable On/Off key and two keys the functions of which depend on where you currently are in the menu (softkeys). A commissioning wizard and help texts are available for commissioning.

There is a 2nd control circuit in the device and the possibility of retrofitting a clock module as a timer.

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

Integrated all-pole effective sine filter

Phase to phase and phase to PE conductor. Thus sinusoidal output voltage. Frequency inverter typical measures such as shielded motor cables are not necessary.

LC multifunction display with clear text display:

Different menu languages are selectable

Simple commissioning by operating modes:

Typical operating modes, e.g. for air-conditioning, refrigeration or ventilation technology can be selected.

Activation of a 2nd control circuit in the selected operating mode:

By assignment of the sensor function input 2 (E2) for the 2nd control circuit.

Simple programmability:

Typical settings can be made easily: e.g. setting of a minimum speed, limitation of the maximum speed, inversions and limits. Setting, e.g. for 2-step mode

2 analog inputs for sensors or setting signals:

Analog input E1 and E2: Setting by operating modes or manually programmable, e.g. 0-10 V, 0-20 mA, 4-20 mA

Analog input E2: programmable, e.g. comparison with sensor 1, difference to sensor 1, average value formation, setpoint setting, setpoint adaptation (e.g. outside temperature-dependent), activation of 2nd control circuit.

2 digital inputs D1 and D2:

Programmable, e.g. enable, switch over setpoint 1 or 2, switch over control or manual mode, switch over E1 or E2, control function reversal, output limitation, display of external fault, reset, direction of rotation reversal

1 analog output A1:

Setting by operating modes or manually programmable, e.g. output signal proportional to modulation, output signal proportional to input signal, invertible, 10 V constant voltage, group control, activation as output for 2nd control circuit

2 digital outputs (relays) K1 and K2:

Setting by operating modes or manually programmable, e.g. operating indication, fault indication, limits, external fault at digital input, activation of external devices, e.g. heating, shutters, group control fans, etc.

Integrated motor protection function:

Connection possibility of PTC thermistors or alternatively thermostats (TB or TP).

Interface RS485 for MODBUS RTU:

Integration into bus system, addressing of the device manually or automatically possible.

Interface USB:

For software update, communication with PC, etc.

Set protection / memory for settings:

Activation of set protection against unauthorised access, restoration of made settings

Event memory:

Querying of occurred events, operating times etc.

Frequency inverters

3~ Fcontrol Basic, modularly extendable speed controllers

Input for sensors or speed settings through

Setting of the desired speed through device or by external default,
e.g. 0...10 V

Add-on modules for functional extension

The 3~ Fcontrol frequency inverters with integrated all-pole effective sine filter are available in the "Basic" version as speed controllers. The special feature of the Fcontrol Basic without display is the functional extendibility by pluggable add-on modules. This enables integration into different BUS networks. Functional extension as a controller is also possible with add-on modules.

In operation as a speed controller, the speed setting can be made by a master control by 0 – 10 V, e.g. by a ZIEHL-ABEGG control module of the UNIcon product series. The speed can also be set manually by connecting a potentiometer. Two-stage operation with adjustable speeds is also possible optionally. The frequency inverters control asynchronous motors (external rotor motors, IEC standard motors) gently, requirement-based and energy saving.

Advantages achieved by Fcontrol frequency inverters are:

- High energy saving
- Operation without shielded motor cables
- The cable length is not limited by the Fcontrol
- Operation without electromagnetic motor noises (ideal for noise sensitive areas)
- No danger to motors (these must not be suitable for frequency inverters) because they are supplied with sinusoidal voltage according to the mains voltage.

The 3~ Fcontrol Basic inverters are universally suitable for many different applications: E.g. refrigerant technology, air conditioning, agriculture, general ventilation tasks, clean room technology.

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
 Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

Integrated all-pole effective sinefilter

Phase to phase and phase to protective earth. Thus sinusoidal output voltage. Frequency inverter typical measures such as shielded motor cables are not necessary.

1 analog input for speed setting:

Analog input E1: Setting by jumper to desired setting signal: 0-10 V, 0-20 mA or PWM

1 digital input:

D1 - 24 V: Enable function On/Off

1 potential-free fault indication contact:

The contact drops out in case of a fault. Max. load 250 V, 2 A.

Integrated motor protection function:

Connection possibility for thermostats "TB" or thermistors "TP".

Optional equipment

Add-on modules for functional extension

- Add-on module AM-MODBUS, Article No. 349045 and AM-MODBUS-W, Article No. 349050:
 - Integration into a MODBUS RTU network with the possibility of automatic addressing by a UNIcon control module with MODBUS-Master function
 - Connection of an A-G-247NW operator terminal
- Additional function in the AM-MODBUS-W:
 - Wireless programming by an A-G-247NW operator terminal via wireless interface
- Add-on module AM-PREMIUM, Article No. 349046 and AM-PREMIUM-W, Article No. 349051:
 - Extension by control functions
 - Connection of sensors
 - Integration into a MODBUS RTU network. Manual addressing in the IO Setup.
 - Additional 0-10 V output for Master-Slave connection
- Additional function in the AM-PREMIUM-W:
 - Cordless programming by an A-G-247NW operating terminal by Wireless Interface
- Add-on module AM-CAN-OPEN, Article No. 349064:
 - Integration into a CAN network. The required EDS file can be provided by our Control Engineering Support Team.
- Add-on module AM-LON, Article No. 349049:
 - Integration into a LON network
- Add-on module AM-PROFIBUS, Article No. 349063:
 - Integration into PROFIBUS networks. The required GSD file can be provided by our Control Engineering Support Team.

Setting of the desired speed through device or by external default,
e.g. 0...10 V

The 3~ Fcontrol frequency inverters with all-pole effective sine filter are available in the "Basic" version with integrated display as speed controllers.

The speed setting can be made by a master control by 0 – 10 V, e.g. by a ZIEHL-ABEGG control module of the UNIcon product series. The speed can also be set manually by connecting a potentiometer. Two-stage operation with adjustable speeds is also possible optionally.

The frequency inverters control asynchronous motors (external rotor motors, IEC standard motors) gently, requirement-based and energy saving.

Advantages achieved by Fcontrol frequency inverters are:

- High energy saving
- Operation without shielded motor cables
- The cable length is not limited by the Fcontrol
- Operation without electromagnetic motor noises (ideal for noise sensitive areas)
- No danger to motors (these must not be suitable for frequency inverters) because they are supplied with sinusoidal voltage according to the mains voltage.

The 3~ Fcontrol Basic inverters are universally suitable for many different applications: E.g. refrigerant technology, air conditioning, agriculture, general ventilation tasks, clean room technology.

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
 Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

Integrated all-pole sinefilter

Phase to phase and phase to protective earth. Thus sinusoidal output voltage. Frequency inverter typical measures such as shielded motor cables are not necessary.

LC multi-function display with plain text display:

Setting of desired values: speeds, motor parameters. Display of modulation, operating states etc.

1 analog input for speed setting:

Analog input E1: Setting by jumper to desired setting signal: 0-10 V, 0-20 mA or PWM

1 digital input:

D1 - 24 V: Enable function On/Off

1 potential-free fault indication contact:

The contact drops out in case of a fault. Max. load 250 V, 2 A.

Integrated motor protection function:

Connection possibility for thermostats "TB" or thermistors "TP".

Devices with a rated temperature below 55 °C can be used up to 55 °C with a reduction in performance.

Frequency inverters

3~ Fcontrol Basic 5-Step, Speed controller

The 3~ Fcontrol frequency inverters with all-pole effective sine filter are available in the "Basic" version with integrated 5-step switch as speed controllers.

The speed setting is made by setting manually directly in the unit. This makes the devices perfectly suitable for replacing transformer control units by the modern frequency inverters. The frequency inverters control asynchronous motors (external rotor motors, IEC standard motors) gently, requirement-based and energy saving.

Advantages achieved by Fcontrol frequency inverters are:

- High energy saving
- Operation without shielded motor cables
- The cable length is not limited by the Fcontrol
- Operation without electromagnetic motor noises (ideal for noise sensitive areas)
- No danger to motors (these must not be suitable for frequency inverters) because they are supplied with sinusoidal voltage according to the mains voltage.

The 3~ Fcontrol Basic 5-Step inverters are especially suitable for the following applications: General ventilation tasks, agriculture.

Electronic voltage controllers

1~ Acontrol, universal controller with display and bypass main switch

Input for sensors or speed settings through

Setting of the desired speed through device or by external default, e.g. 0...10 V

Connecting pressure sensors (refrigeration), e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors, e.g. sensors type TF.., e.g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning), e.g. type DSG.. sensors, measuring range 0...6000 Pa, acquisition of volume flows up to 65000 m³/h

Connecting air velocity sensors, e.g. type MAL.. sensors, measuring range 0...1 m/s, 0...10 m/s

Connecting additional sensors, e.g. combination sensors, CO₂, sensor signal 0...10 V / 0...20 mA / 4...20 mA

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

LC multifunction display with clear text display:

Different menu languages are selectable

Simple commissioning by operating modes:

Typical operating modes e.g. for air-conditioning, refrigeration or ventilation technology can be selected.

Easy programmability:

Typical settings can be made easily: e.g. setting of a minimum speed, limitation of the maximum speed, inversions and limits. Setting, e.g. for 2-step mode

2 analog inputs for sensors or setting signals:

Analog input E1 and E2: Setting by operating modes or manually programmable, e.g. 0-10 V, 0-20 mA, 4-20 mA

Analog input E2: programmable, e.g. comparison with sensor 1, difference to sensor 1, average value formation, setpoint setting, setpoint adaptation (e.g. outside temperature-dependent)

2 digital inputs D1 and D2:

Programmable, e.g. enable, switch over setpoint 1 or 2, switch over control or manual mode, switch over E1 or E2, control function reversal, output limitation, display of external fault, reset

1 analog output A1:

Setting by operating modes or manually programmable, e.g. output signal proportional to modulation, output signal proportional to input signal, invertible, 10 V constant voltage, group control

2 digital outputs (relays) K1 and K2:

Setting by operating modes or manually programmable, e.g. operating indication, fault indication, limits, external fault at digital input, activation of external devices, e.g. heating, shutters, group control, fans, etc.

Integrated motor protection function:

Connection possibility for thermostats "TB".

Interface RS485 MODBUS RTU:

Integration into bus system

Set protection:

Activation of set protection against unauthorised access, restoration of made settings

Event memory:

Query of occurred events, operating times etc.

Acontrol, universal controller with display and bypass main switch

Electronic voltage controllers

1~ Acontrol, speed controller or pressure/temperature controller

These versions are primarily used as speed controllers. They are beneficial for upstream control applications or if the device is combined with control modules from the ZIEHL-ABEGG UNIcon product family.

Depending on the device version, speeds can be pre-set. They can also be set to second stage operation with external switchover, or implemented via an external potentiometer.

The Acontrol voltage control devices also provide an option to control based on temperature or pressure (for example, refrigerant pressure in cooling equipment).

Input for sensors or speed settings through

Setting of the desired speed through device or by external default,
e.g. 0...10 V

Connecting pressure sensors (refrigeration),
e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Electronic voltage controllers

3~ Ucontrol, universal controller with display

Most ZIEHL-ABEGG external rotor motors are voltage controllable. For simple and cost-effective speed control of these motors or fans, electronic voltage controllers can be supplied.

For the various applications in refrigeration, air-conditioning and general ventilation technology we supply universal devices from the Ucontrol product family.

These universal control devices also provide an option to control based on temperature, pressure (for example refrigerant pressure in cooling equipment), differential pressure in ventilation systems, or other physical factors.

The Ucontrol universal devices are ideal for following applications: refrigeration, air conditioning, agriculture, general air supply and ventilation jobs, clean room technology. By selecting pre-programmed operating modes, fast commissioning for typical applications in the stated sectors is possible.

Input for sensors or speed settings through

Setting of the desired speed through device or by external default
e.g. 0...10 V

Connecting pressure sensors (refrigeration),
e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors,
e. g. sensors type TF..
e. g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning)
e.g. type DSG.. sensors, measuring range 0...6000 Pa,
acquisition of volume flows up to 65000 m³/h

Connecting additional sensors,
e.g. combination sensors, CO₂,
sensor signal 0...10 V / 0...20 mA / 4...20 mA

Connection diagram

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment/properties

LC multi-function display with plain text display:

Different menu languages can be selected

Optional equipment

IO add-on module type Z-Modul-B, Article No. **380052**
if the integrated inputs and outputs are not sufficient
other inputs and outputs can be created with the Z-Modul-B
. These are also programmable:
1 analog input
1 analog output
3 digital inputs
2 digital outputs (relays)

LON® Add-on module type Z-Modul-L, Article No. **380086**

Simple start-up by operating modes:

Typical operating modes, e.g. for air conditioning, refrigerant or
ventilation technology can be selected.

Simple programmability:

Typical settings can be made easily: e.g. minimum speed setting,
limitation of the maximum speed, inversions and limits. Setting, e.g.
for 2-step mode

2 analog inputs for sensors or setting signals:

analog input E1 and E2: Setting by operating modes or manually
programmable, e.g. 0-10 V, 0-20 mA, 4-20 mA
analog input E2: programmable, e.g. comparison with sensor 1,
difference to sensor 1, average value formation, setpoint setting,
setpoint adaptation (e.g. outdoor temperature-dependent)

2 digital inputs D1 und D2:

Programmable, e.g. enable, switch over setpoint 1 or 2, switch over
control or manual mode, switch over E1 or E2, invert control func-
tion, output limitation, display external fault, reset

1 analog output A1:

Setting by operating modes or manually programmable, e.g. output
signal proportional to modulation, output signal proportional to input
signal, invertible, 10 V constant voltage, group control

2 digital outputs (relays) K1 and K2:

Setting by operating modes or manually programmable, e.g. operat-
ing indication, fault indication, limits, external fault at digital input,
activation of external devices, e.g. heating, shutters, group control,
fans, etc.

Integrated motor protection function:

Connection possibility for PTC thermistors or alternatively thermo-
stats (TB or TP).

Interface RS485 MODBUS RTU:

Integration into bus system

Interface USB:

For e.g. software update, communication with PC (not for devices
50, 80 Ampere / not integrated in UL devices)

Set protection:

Activation set protection against unauthorised access, restoration of
made settings

Event memory:

Querying of occurred events, operating times, etc.

Electronic voltage controllers

3~ Ucontrol, universal controller with display and bypass main switch

Most ZIEHL-ABEGG external rotor motors are voltage controllable. For simple and cost-effective speed control of these motors or fans, electronic voltage controllers can be supplied.

For the various applications in refrigeration, air-conditioning and general ventilation technology we supply universal devices from the Ucontrol product family.

These universal control devices also provide an option to control based on temperature, pressure (for example refrigerant pressure in cooling equipment), differential pressure in ventilation systems, or other physical factors.

The Ucontrol universal devices are ideal for following applications: refrigeration, air conditioning, agriculture, general air supply and ventilation jobs, clean room technology. By selecting pre-programmed operating modes, fast commissioning for typical applications in the stated sectors is possible.

Input for sensors or speed settings through

Setting of the desired speed through device or by external default, e.g. 0...10 V

Connecting pressure sensors (refrigeration), e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors, e.g. sensors type TF.. e.g. active sensor type MTG..

Connecting differential pressure sensors (air conditioning), e.g. type DSG.. sensors, measuring range 0...6000 Pa, acquisition of volume flows up to 65000 m³/h

Connecting air velocity sensors, e.g. type MAL.. sensors, measuring range 0...1 m/s, 0...10 m/s

Connecting additional sensors, e.g. combination sensors, CO₂, sensor signal 0...10 V / 0...20 mA / 4...20 mA

These versions have an additionally integrated bypass main switch. This offers the possibility of bypassing the internal device electronics. In the bypass position, the applied line voltage is switched directly to the output.

Devices with a rated temperature below 55 °C can be used up to 55 °C with a reduction in performance.

Electronic voltage controllers

3~ Dcontrol, speed controller or pressure/temperature controller

These versions are primarily used as speed controllers. This is beneficial for upstream control applications or when the devices are combined with control modules from the ZIEHL-ABEGG UNIcon product family. Alternatively, speeds can be pre-set. They can also be set to second stage operation with external switchover, or implemented via an external potentiometer. The Dcontrol voltage controllers also provide an option to control based on temperature or pressure (for example, refrigerant pressure in cooling equipment).

Input for sensors or speed settings through

Setting of the desired speed through device or by external default,
e.g. 0...10 V

Connecting pressure sensors (refrigeration),
e.g. type MBG.. sensors, measuring range 0...30 bar, 0...50 bar

Connection of thermistors,
e. g. sensors type TF..
e. g. active sensor type MTG..

Standard conformity

Interference emission according to EN 61000-6-3 (domestic)
Interference immunity according to EN 61000-6-2 (industrial)

Equipment/Characteristics

Simple commissioning with dip switch and potentiometer:

The controls are accessible directly in the device terminal compartment. Set the dip switch to select the desired device function (operating modes: speed controller, temperature, or pressure controller). The setpoint preset is set with the potentiometer.

Two analogue inputs for sensors or default signal

Analogue input E1 and E2: Set/enable by selecting the operating mode (dip switch), e.g., 0-10 V, 4-20 mA. When operating as a controller, e.g. connection of two sensors for controlling the higher value (e.g., two-loop condenser)

2 digital inputs D1 and D2

For connecting an external, floating contact.

D1: Enable function On/Off

D2: Reverse the control function, e.g. heating, cooling

1 analogue output A1:

Output signal proportional modulation or constant voltage +10 V (max. 10 mA) to connect an external potentiometer for speed prese

1 floating alarm relay K1:

During a fault, the relay drops out. Max. load 250 V, 2 A.

Integrated motor protection function

Connection facility for thermostat "TB" or thermistor "TP"

Interface RS485 MODBUS RTU

Motor protection units

For monitoring thermostats (TB)

Complete motor protection is implemented by connecting the thermostat, which is integrated into the motor, to the motor protection unit. Most ZIEHL-ABEGG external rotor motors are equipped with thermostats (TB) in the winding. These thermostats open during high winding temperatures, facilitating the direct monitoring of the temperature in the motor, thus ensuring the direct protection of the motor. When the thermostat opens, the motor protection unit is triggered and has to be manually reset; this is done to prevent an unwanted reconnection after the motor has cooled off.

Additional functions of the 3~ STDT motor protection units: They have an overcurrent trigger integrated. That means the device acts like a fuse and can be used for "current distribution". The adjustable overcurrent trigger protects the cable leading to the connected motors. Dual terminals located on the input and output sides of the motor protection unit facilitate simple wiring of multiple motors or fans on the output side of a powerful controller.

Equipment/Characteristics

Complete motor protection

Automatic shut-off when connected thermostat „TB“ opens (direct temperature monitoring in the motor winding).

Integrated button

Switch connected motors on and off manually. Manual reset after motor fault (protection from unwanted restarting)

Optional: operating status contact

Type "ZB" with one open contact and one close contact

Type "ZK" with two close contacts

Optional padlock feature

Type „Zrep“ for the IP55 housing version. The motor protection unit can be locked during servicing (max. 3 locks)

Cable protection (only in 3~ STDT devices)

Via integrated overcurrent trigger, which can be adjusted to the cable cross section.

Symbols, Units of Measure

Symbol	Unit	Description
p_{sF}	Pa	Static pressure increase
p_{fd}	Pa	Dynamic pressure
q_v	m³/h	Air flow
n_N	min⁻¹	Rated speed
P_i	kW	Input power
P_{sys}	kW	Input power system (including controller)
U_N	V	Rated voltage
f_N	Hz	Rated frequency
I_N	A	Rated current
I_A	A	Starting current
ΔI	%	Percentage increase of current based on rated current for speed control by voltage reduction
C_{400V}	µF	Capacity
$t_{R(min)}$	°C	Minimum permitted ambient temperature
$t_{R(max)}$	°C	Maximum permitted ambient temperature
L_{WA5}	dB(A)	A-rated suction-side sound power level
η_{statA}	%	Overall efficiency, static according to measurement category A at optimum duty point without losses of electronic speed control according to calculation method ErP-commission regulation No. 327/2011 annex II
N_{actual}	-	Actual efficiency grade of the fan based on an electrical input power of 10 kW at its point of optimum energy efficiency
N_{target}	-	Target efficiency grade at motor input power 10 kW
L_{pA}	dB(A)	A-rated suction-side or pressure-side acoustic pressure level
P_{spez}	Wh/1000m³	Specific power

Notes pertaining to the ErP evaluation

The identifier ErP2015 indicates that a fan meets the minimum efficiency factors of the respective level according to the ErP directive or the fan is not subject to the regulations of ErP directive ($P_i < 125$ W). The actual efficiency in the efficiency optimum of the fan which is used for the ErP evaluation is called η_{statA} . In order to meet ErP requirements, this efficiency must reach a certain minimum value (target energy efficiency). The efficiency N is a parameter in the calculation of the target energy efficiency of the ErP directive. As a reference value for the required efficiency N_{nom} we also specify the actual efficiency N_{act} based on a motor input power of 10 kW.

All ErP-relevant data refers to measured data according to measurement category A, which was determined in the long housing from ZIEHL-ABEGG with inlet ring without guard grille, as per ISO 5801.

Aerodynamics and Acoustics

Measurement method

The 'characteristic curve' diagram shows the pressure increase Δp_{sf} in Pa as a function of the volume flow rate q_v in m^3/h .

Technical conditions of supply

The specified performance data meet the requirements for accuracy class 3 for AC fans and accuracy class 2 for ECblue fans in line with DIN 24 166 and apply to the rated data and air performance curves at the rated voltage. The continuous line in the characteristic map represents the optimum reliable operating range for axial fans.

Fan test bench

The fan characteristic curves are determined on a combined test bench for acoustics and air performance.

The characteristic curves are measured in compliance with DIN EN ISO 5801 and AMCA 210-99. The sound power levels are measured in compliance with DIN EN ISO 3745 and ISO 13347-3 using the enveloping surface measuring method.

The figure below shows an example of the measuring setup. The fan intake is installed in the measuring chamber at free intake and free exhaust (installation type A as per DIN EN ISO 5801 or AMCA 210-99).

Air density

The air density and humidity are conditioned during the measurement using heat exchangers and kept largely constant. The characteristic curves shown refer to the measuring density. The mean measuring density is 1.16 kg/m^3 .

Noise level data

Unless otherwise indicated, this catalogue specifies the intake side, A-evaluated sound power levels L_{WA} .
The sound power levels are determined by using the enveloping surface method in compliance with **ISO 13347-3**, accuracy class 1 and/or **DIN EN ISO 3745**.

This is done by measuring the acoustic pressure level L_p of the individual third-octave bands at 12 points on the enveloping surface (Fig. 1a). The measured acoustic pressure levels for the third-octave bands are initially used to calculate the sound power level for the third-octave bands and then the intake side sound power level L_w . To do this, the fans are installed with a free intake (from the measuring chamber) and (air) outlet (into the surrounding area). The standard measurements are carried out without the need for additional parts, e.g. guard grille. The measuring equipment used complies with **DIN EN 61672**.

Because of the different weighting of the third-octave sound power level, the A-evaluation, which is typically carried out, takes into account the subjective nature of human sound perception. The A-tested sound power level is the standard variable used to assess the sound characteristics of technical equipment.

Calculation of pressure side sound power level and total sound power level

For axial fans, the pressure side sound power level is approximately equal to the intake side level. The total sound power level is calculated by adding up the power from the sound power levels of both the intake and the pressure side (see **DIN 45 635 Part 1, Appendix F**, **DIN EN ISO 3745**). Thus, it is approximately 3 dB higher than the intake side sound power level specified in the catalogue.

Fig. 1a: Position of microphones in relation to axial fans

Fig. 1b: Fan test-bench

Determination of total sound power level during the interaction of several sound sources

The total sound power level of several individual sound sources operating concurrently is calculated by adding the power of the individual levels in compliance with **DIN EN ISO 3745**. This equation is the basis for the diagrams in Fig. II and III.

To add up several sound sources with the same level, please see diagram (Fig. II) for complete level information; e.g. 6 identical sound sources operating concurrently results in a total level that is approx. 8 dB higher.

The total sound power level of two sound sources with different levels can be seen in diagram Fig. III. For example, two sound sources whose sound power levels differ by 4 dB produce a total sound power level that is around 1.5 dB higher than that of the louder sound source.

Determination of acoustic pressure level

The A-tested acoustic pressure level L_{PA} for rooms with average absorption capacity for a distance of 1m from the fan axis is calculated by subtracting 7 dB from the A sound power level L_{WA} . In most cases, this assumption is correct and provides a sufficient level of accuracy. However, the sound characteristics can be hugely influenced by the individual installation situation.

Absorption of the acoustic pressure level, depending on the distance with partial reflection, is shown in Fig. IV.

Fig. II: Addition of several sound sources

Fig. III: Sound sources of different levels

Fig. IV: Reduction of sound pressure level

Electrical connection and motor

Fan drive

The three-phase or single-phase AC external rotor motor integrated into the fan hub meets the requirements for circulating electrical machines set out in **DIN EN 60 034-1** (VDE 0530 Part 1).

AC technology:

The rated voltage for three-phase current is 400 V, for single-phase AC motors 230 V.

EC technology:

The FE2owlet-ECblue axial fans are powered by a highly efficient EC motor with integrated commutation electronics. Depending on the version, the ECblue motors have a broad voltage range.

1~ 200-277 V, 50/60 Hz

3~ 200-240 V, 50/60 Hz

3~ 380-480 V, 50/60 Hz

Operation with frequency inverter

ZIEHL-ABEGG axial fans are suitable for operation with frequency inverters if the following requirements are met:

All-pole sine filters - as supplied by some inverter manufacturers - must be installed between the inverter and the motor (sinusoid output voltage - phase to phase, phase to protective earth). Request our technical information L-TI-0510 for more details.

du/dt filters (also known as motor or attenuation filters) may not be used instead of sine filters.

When using sine filters, there may be no need for screened motor power cables, metal terminal boxes or a second earth connection on the motor (consult the sine filter supplier).

Electrical connection

Voltage

The single-phase or three-phase AC motors are suitable for 400 V or 230 V and are continuously voltage controllable. Please pay attention to the data sheet.

Current

Motor current is dependent on the installation (i.e. flow situation and nozzle) and operation (i.e. operating point in connection with air density). For the definition of electrical installations, the following value is recommended: $I_{\max} = I_N + \Delta I + \approx 30\%$

Motor connection

Mains connection via terminal box or connecting cable implemented as per dimensional drawings. Cable length tolerance ± 3 cm.

Terminal box

Terminal boxes are made of impact resistant and weather resistant plastic or die-cast aluminium.

All terminal boxes have two M20x1.5 cable inlets.

For FE2owlet and FE2owlet-ECblue axial fans in F design without guard grille, the terminal box is located on the outside on the flange ring. In the F design with guard grille, the terminal box is mounted on the front on the motor.

Connection cable

Heat and UV resistant halogen-free hose cables are used, marked by a colour code or connection designations.

The cable construction complies with VDE 0282 part 804 and is suitable for operating voltages of up to 690 V.

Temperature resistance -50 to +150 °C.

The ends of the connection are stripped for 10 cm and fitted with wire end ferrules.

Service capacitor

See system components chapter.

Installation and usage information

Materials and corrosion protection

FE2owlet-ECblue, FE2owlet, ZAplus-ECblue and ZAplus axial fans have an impeller made of high performance composite material or aluminium.

Rotor and stator flange are made of sea water resistant aluminium alloy using a die-casting method.

The fan nozzles are made of hot-dipped thin sheet. ZAplus nozzles consist of high performance composite material.

Additional painting possible upon request and at an extra charge.

Depending on the fan size, motor suspensions are produced as wire support grids or a welded structure with flat steel struts.

The wire carrying grille and welded structure with flat steel struts are provided with weather resistant plastic coating.

Notify us of the area of application subject to increased climatic stress or use in wet rooms such as breweries, dairies or similar.

Installation position

The axial fans are usually suitable for all installation positions. For details please see the part-specific documentation.

Installation and usage information

Conditions for use and lifetime

Protective device

The fans may only be operated if installed appropriately for their purpose and when safety is ensured through protective devices as per **DIN EN 13857** or **ISO 13852 (DIN EN ISO 12100)** or by other construction protection measures.

Condensation holes

According to the installation position Vo (rotor upwards) or Vu (rotor downwards), the condensation hole beneath must be open. In installation position H, condensation can flow through the seal gap between the stator and the rotor.

Operating mode

Continuous operation with occasional starts (S1) according to **DIN EN 60034-1:2011-02**. If the defined temperature $t_{(R(\min))}$ of the product is less than -25 °C an occasional starting between -25 °C and the defined minimum temperature is permissible. Continuous operation below -25 °C only with special bearings for refrigeration applications on request.

Permissible minimum and maximum ambient temperature for operation

Please refer to the technical documentation of the product for the minimum and maximum ambient temperature valid for the respective fan. Operation below -25 °C as well as partial load operation for refrigeration applications is only possible with special bearings for refrigeration applications on request. If special bearings for refrigeration applications are installed in the fan, please observe the permissible maximum temperatures in the technical documentation of the product.

Ball-bearing service life

The according to standard calculation methods determined bearing service life expectation of the motor-integrated ball bearings is mainly determined by the grease service life F10h and amounts for standard application to approx. 30.000 – 40.000 operating hours. The fan is maintenance-free due to the use of ball bearings with „lifetime lubrication“. Once the grease operating life F10h has been reached, it may be necessary to replace the bearing. The bearing service life expectation may change compared to the specified value, if operating conditions such as increased vibrations or shocks, increased or too low temperatures, humidity, dirt in the ball bearing or unfavourable control modes are present. A service life calculation for special applications can be provided on request.

Guard grille

A guard grille can be included in the scope of delivery if the fan includes a motor suspension or motor suspension with wall ring.

The guard grille is on the suction or pressure side of the fan, depending on airflow direction.

The chapter on system components contains separate guard grilles, which can be installed on the exhaust or suction sides of the fan as required, depending on installation position and complying with the safety requirements as per **DIN EN ISO 13857:2008 (Tab.4)**.

Please observe the section "Influence of guard grilles".

Axial fan FN, design Q

Guard grille system component, blow out side

Influence on guard grille

Safety distances set forth to keep out of reach of hazardous areas

DIN EN ISO 13857:2008 (Tab.4) sets forth the required safety distances to prevent upper limbs from getting into hazardous areas.

The preferred "protective construction" used on axial fans is a guard grille. As a standard feature, the vast majority of our axial fans (S, K, D, W, Q designs) are equipped with a guard grille integrated into the suspension. For fan types featuring a suspension without integrated guard grille, a separate guard grille is available as an optional accessory.

The guard grille results in a resistance to the conveyed airflow, which manifests itself in the pressure loss Δp_{VG} .

The pressure loss Δp_{VG} increases in a linear relationship with a coefficient of resistance ζ_G or squared with the conveyed volume flow rate q_v .

$$\Delta p_{VG} = \zeta_G \cdot \frac{\rho}{2} \cdot \frac{16 \cdot q_v^2}{\pi^2 \cdot d_n^4}$$

The coefficient of resistance ζ_G is largely determined by the screen design (mesh size, ring spacing), which is set forth in **DIN EN ISO 13857:2008 (Tab.4)**. The coefficient of resistance for the ZIEHL-ABEGG guard grilles, which was obtained in a series of tests on FC series fans, is within the following range: $\zeta_G = 0.2\text{--}0.4$. This covers installation of the guard grille on the intake side as well as the pressure side. The following numerical equation provides an approximate estimate of the pressure loss caused by the guard grille in [Pa]:

$$\Delta p_{VG} = K_{VG} \times 10^{-8} \times q_v^2$$

The loss factor K_{VG} depends on the nominal fan diameter d_n and can be seen in the above diagram. The volume flow rate q_v is inserted in [m^3/h].

Note:

FANselect selection program supplies all characteristic curves, also including the influence of the guard grille. See <http://www.fanselect.net/>.

Factor for loss attributable to the grating K_{VG} as a function of the diameter d_n of the fan

Installation instructions

Airflow conditions

When installing fans in the devices, favourable airflow conditions must be maintained; this also applies to compact designs.

The following installation recommendations (Fig. I and II) indicate the required minimum distances.
